You will need:
- Drawing pin
- Square paper
- Paper straw
- Pencil
- Plasticine or blu-tak
- Safety scissors
- Ruler
- Glue

How to make your pinwheel:
1. Lay the paper flat onto a table and draw a diagonal line with the pencil and ruler from one corner to the opposite corner.
2. Repeat for the opposite corners to mark the centre of the square paper.
3. Carefully cut along each line towards the centre of the paper, leaving about 2cm in the middle of the paper. Don’t cut all the way through! Ask a grown-up to help you if you need help with scissors.
4. You will now have four triangle shapes... why not colour each triangle of your pinwheel!
5. Take the top left corner from each triangle and carefully place it in the centre of the square, without folding the paper. Glue in place.
6. Do this for each triangle until all four corners are in the middle of the square.
7. Ask a grown-up to help you push the push pin from the front, through each of the four corners at the centre of the pinwheel, out through the back.
8. Take the paper straw and ask a grown-up to help you push the pin through the top of the straw, placing a small piece of plasticine or blu-tak onto the end of the pin.
9. Now your pinwheel is ready to go!
